

# "COD" Constitutional Oncogenetics Dictionary: an application on OS/Android environment.

Noureddine Boukhatem and Houda Smiai.

Mohammed First university, Morocco. Yas Medical Center, Al Buraimi, Oman

## Objective

Oncogenetics is a growing discipline. It is defined as the identification and management of families where there is a suspected hereditary risk of cancer. This relatively new discipline is part of modern medicine that aims to be both preventive and predictive.

To facilitate the acquisition of accurate knowledge by oncogenetic practitioners we developed this dictionary.

## Material and methods

We reviewed a substantial number of published scientific information dealing with this subject in a book. Here we introduce a description of the book and the smartphone application entitled:

## COD: Constitutional Oncogenetics Dictionary

## Conclusion

The book and the application facilitate the acquisition of accurate knowledge by oncogenetic practitioners, other medical specialists, and medical students.
